

Jacob White Packaging Ltd

Jacob white, founded in 1911, is justifiably proud of its reputation throughout the world as one of the most versatile manufacturers of cartoning equipment.

The company produces a varied range of standard and custom built machines which erect, fill and seal cartons to any degree of automation.

JW's main claim to fame, however, is product handling. Every machine is tailored to suit its own individual range of products, particular attention having been paid to the sensitivity with which even the most delicate products are transported through the packaging process.

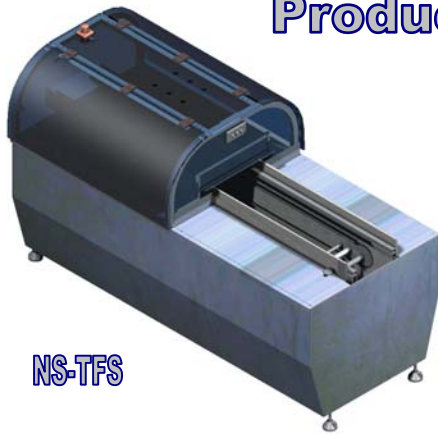

Jacob White has invested in the most appropriate computer technology to aid and speed the design process. Its high level of success in this field has been achieved by a unique understanding of cartoning and product handling.

The result can be demonstrated by highly innovative solutions to difficult packaging problems.

All Jacob White machines are created to deliver high productivity, versatility, simple size change and easy maintenance. They are, in fact, very user-friendly.

The company has a strong market share in Hygiene, Food & Pharmaceutical companies, having installations in 62 countries, on more than 5000 sites.

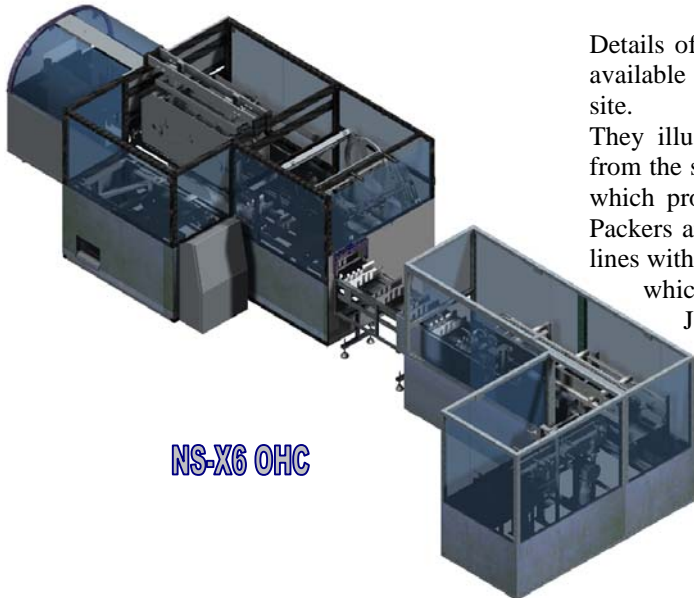

Product Range

NS-TFS

SLX3

NS-X6 OHC

Details of all machines in the Jacob White range are available both as individual leaflets and via the web site.

They illustrate the range Jacob White can provide, from the simple manual and semi-automatic machines which provide the flexibility demanded by Contract Packers and smaller producers to the fully automated lines with product handling and transfer equipment which are needed by larger organisations.

Jacob White has machines to suit all needs.

Every machine is built by hand, and supervised by skilled engineers who have been with the company for many years.

The machines are engineered to be robust, durable, and to deliver a long and reliable working life.

Jacob White Sales Service & Spares

Sales, Installation, and Spares & Service are all available world-wide. Offices in Indonesia and the Philippines, together with highly skilled agencies, liaise with the dedicated JW Service Team to provide back-up for customers in every country.

Jacob White Refurbishment Programme

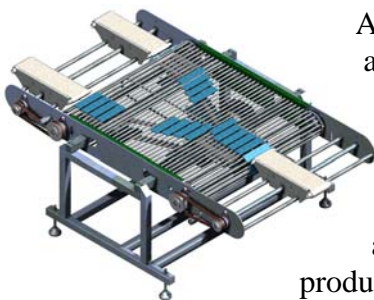

As customers' businesses grow and change so their machinery demands develop, with the result that used equipment is traded for new technology and faster machines to handle larger output.

Jacob White has therefore developed a specialist department to refurbish used machines and return them to the market in "good as new" condition.

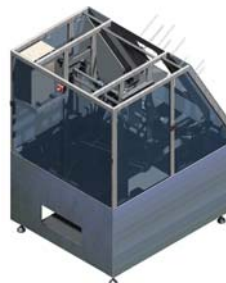

Design & Innovation

Jacob White machines are the result of high-tech, innovative design, using the latest 3D CAD software to guarantee absolute accuracy in manufacture.

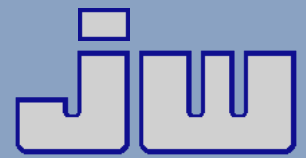

All components for JW machines are manufactured either by CNC machinery or hand crafted by highly skilled engineers for special items.

JW also employs the latest laser and water-cutting technologies to produce large volume components, allowing Jacob White to deliver total reliability, high speed, versatility and high productivity whilst remaining cost-effective.
